

**Sutton GIS System  
March 09 Update**

The Town of Sutton will utilize 43D Funding to establish and in house GIS System.

The town is participating in the MassGIS Spring 2009 aerial photography program. We will secure this new flight photography as well as additional information that allows us to have GIS mapping that meets National Map Accuracy Standards.

We will set up hardware and acquire software to host this data. We will obtain all existing data layers from our mapping consultant, Cartographics, and work with a GIS consultant to merge all old and new data into one format.

This information will ultimately be extremely useful not only to staff, but will be made available to residents and the development community.
