

Sewer Feasibility Study March 09 Update

The Towns of Northbridge and Sutton are working cooperatively to investigate the feasibility of tying portions of the area of Northbridge west of Meadow Pond into the South Sutton Wastewater Treatment Plant at Hough Road.

The study will investigate existing conditions, optimal operating conditions at the plant, and projected sewer needs in both communities. The study will summarize what new construction and/or physical improvements would be necessary to complete the tie in and provide an approximate cost.

Once the study is in hand, the information will be provided to the Administrators and Selectmen of the respective communities to decide if they wish to enter into an inter-municipal agreement for the provision of sewer across town lines.
