

Sewer Feasibility Study October 2010 Update

The Towns of Northbridge and Sutton have been working cooperatively to investigate the feasibility of tying portions of the area of Northbridge west of Meadow Pond into the South Sutton Wastewater Treatment Plant at Hough Road.

A study is complete that investigated existing conditions, optimal operating conditions at the plant, and projected area sewer needs in both communities. The study summarized what new construction and/or physical improvements will be necessary to complete the tie in and has provided an approximate cost.

A draft inter-municipal agreement is being reviewed by Sutton and Northbridge to allow future connections.
