Art – We had our hydroseeder onsite Monday/Tuesday this week to complete. It appears they missed the emergency entrance but that is the only area.

I may be able to do something one of those days but it seems there are still several areas where stabilization is not complete. Please advise.

Arthur – What is your availability Wednesday and Thursday for a site walk? We would like to review the site and get sign off for winter stabilization.

Thanks,

Thank you James. I'll look forward to the final solution for erosion in the westerly drainage swale.

Also, Photo #10 indicates a "recently loamed area that should be hydroseeded", apparently associated with the emergency access road at Lackey Dam Road. Please respond regarding the status of this area.

Thanks, ART

Art,

Please see the attached inspection report from 12/16/2022. The only item to address is the Western Swale. We are working with Beals & Thomas on a detail and pricing for implementation. As of yesterday, all remaining areas have been seeded.

Thanks,
