## Comments:

Graves Engineering, Inc. (GEI) was on-site to observe construction of the road and the road's drainage/stormwater management system. This site visit was conducted throughout the entire site. I observed the following:

- Stormwater Management Area (SWMA) #1 was experiencing approximately 75% grass growth.
- SWMA #2 was experiencing approximately 50% grass growth. The northern third of the area needs to be reseeded to encourage additional grass growth.
- SWMA #3 was experiencing approximately 50% grass growth along the northern, eastern, and western slopes, and 20% in the southeastern corner. The southwestern corner and bottom showed no signs of grass growth. The area needs to be reseeded to encourage additional grass growth.
- The slope between stations 43+00 and 45+00 was experiencing approximately 70% grass growth.
- SWMAs #1 and #2 were dry. SWMA #3 was damp.

Based upon visual observations only, the work observed today appeared to be consistent with the approved plans.

## Action to be Taken:

Client will be notified of this site visit by way of this report.
